The Green Homes League is a national program with hundreds of Green Consultants in the field and thousands of people that we have helped "Go Green." This program is what might be termed a true Grassroots project that does not rely upon government money or wait for legislative mandates. Our core belief is that Going Green is not only smart and necessary in our world of strained resources, but it is a fantastic money saver. Everyone knows that energy rates are going up.

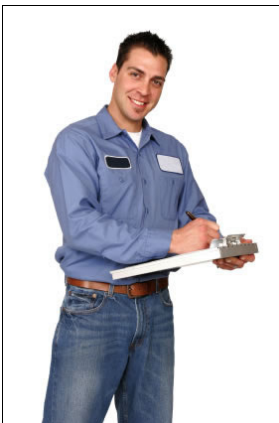

How certifications works The process starts with by completing our Green Home assessment. Your area Certified Green Consultant will assist you, or you can follow our program without any real stress. The Green Homes League will continue to offer "Green Home Tips" throughout the year. Going Green is a progressive project that is not solved by a one-time effort. Month by month, you will find practical ideas that will work for anyone. Most ideas are affordable, and will often save you a great deal of money year after year.

Earning Points

Every Green activity has a point value. Most people can think of four to six ideas, but there are hundreds of Green ideas that can be applied at little or no real cost. We take great pleasure in showing our GHL members how to make Green work in their homes.

Request a Green Associate

Getting started is simple. The fee to participate in the certification program is very modest, which we believe you will get back many times over in savings and benefits. Just don't delay at this needful task. The clock is ticking, and we need thousands of people to do more than replace CFL bulbs. Better yet, your assessment will include an Indoor Air Quality test and well as tests for radon, mold, and carbon monoxide with expert review of all the Green possibilities with a certified Green Consultant™.

Terms and Conditions

The Green Homes League offers information and guidance in practical steps to improve the Green character of all kinds of residential properties, including existing homes, rental homes or apartment, new homes, and secondary homes. Each application is for one residence, and provides for one year of Green training and certification.

Upon accumulation of sufficient points (see below), the owner/renter will be award the appropriate Green

Home certification including:

- 1.Green Homes League Certified window seal
- 2.Green Homes League Certified certificate
- 3.Green Homes League Certified certification letter.

The applicant represents that all indicated Green improvements are actual and verifiable. An audit by a certified Green Consultant may be required from time to time to confirm the integrity of the certification process. Should the applicant wish the additional services of a certified Green Consultant, those fees (though modest) are not included in the basic fee.

There are no mandatory purchases or product requirement to achieve certification. It is more important that the applicant apply his/her best efforts to achieve a practical solution to the Green issues of their residence. Refunds of fees are not refundable. Certification is not guaranteed. This is not a "Pay for Certification" program, but a certification that must be earned by point accumulation.
